CONTENTS OF EACH BOOK / GUIDE

BS7671 1
Electrician's Guide to Building Regs 3
On-Site guide 6
In-service Inspection and Testing of electrical equipment 9
Guidance Note 3 – Inspection and Testing 11
Electrical vehicle charging Equipment Installation 13
Electricity at Work Regulations 14
Approved documents 15

BS7671

PART 1 – SCOPE, OBJECT AND FUNDAMENTAL PRINCIPLES

Chapter 11 – Scope of the guide

Chapter 12 – Object and Effects

Chapter 13 – Fundamental principles

PART 2 – DEFINITIONS

PART 3 – ASSESSMENT OF GENERAL CHARACTERISTICS

Chapter 30 – Assessment of general characteristics

Chapter 31 – Purposes, Supplies and Structure

Chapter 32 – Classification of external influences

Chapter 33 – Compatibility

Chapter 34 – Maintainability

Chapter 35 – Safety services

Chapter 36 – Continuity of service

PART 4 – PROTECTION FOR SAFETY

Chapter 41 – Protection against electric shock

Chapter 42 – Protection against thermal effects

Chapter 43 – Protection against overcurrent

Chapter 44 – Protection against voltage disturbances

Chapter 45 – NOT USED

Chapter 46 – Isolation and switching

PART 5 – SELECTION AND ERECTION OF EQUIPMENT

Chapter 51 – Common rules

Chapter 52 – Selection and erection of wiring systems

Chapter 53 – Protection, Isolation, Switching, Control and Monitoring

Chapter 54 – Earthing arrangements and protective conductors

Chapter 55 – Other equipment

Chapter 56 – Safety services

PART 6 – INSPECTION AND TESTING

Chapter 61 – Not used

Chapter 62 – Not used

Chapter 63 –Not used

Chapter 64 – Initial verification

Chapter 65 – Periodic inspection and testing

PART 7 – SPECIAL INSTALLATIONS OR LOCATIONS

PART 8 – FUNCTIONAL REQUIREMENTS

Chapter 82 – Prosumer's low voltage electrical installations

APPENDICES

1 British standards to which reference is made in BS7671
2 Statutory regulations and associated memoranda
3 Time / current characteristics of overcurrent protective devices
4 Current-carrying capacity and voltage drop for cables
5 Classification of external influences
6 Model forms for certification and reporting
7
8 Current-carrying capacity and voltage drop for busbar trunking and powertrack systems
9 Definitions – Multiple source, DC and other systems
10 Protection of conductors in parallel against overcurrent
11 Warning and user instruction labels
12
13 Escape routes and fire protection

14 Determination of prospective fault current
15 Ring and radial final circuit arrangements, Regulation 433.1
16 Devices for protection against overvoltage
17 Energy Efficiency

Electrician's Guide to Building Regs

SECTION 1 – LEGISLATION

1.1 – Health & safety
1.2 – The Buidling regulations
1.3 – Approved document P: Electrical safety - dwellings
1.4 – Notification to Building Control, etc
1.5 – Notifiable work
1.6 – Non-notifiable work
1.7 – Provision of information
1.8 – Scottish Building Regulations
1.9 – Welsh Building Regulations
1.10 – Building Regulations in Northern Ireland
1.11 – Qualifications for Qualified Supervisor

SECTION 2 – DESIGN SELECTION AND ERECTION OF ELECTRICAL INSTALLATION

2.1 – Design
2.2 – Selection of materials
2.3 – Installation
2.4 – Protection to prevent the spread of fire and smoke

SECTION 3 – MAINS POSITION

3.1 – Location and accessibility
3.2 – Supply systems
3.3 – Earthing and protective equipotential bonding
3.4 – Labelling
3.5 – Installing residual current devices (RCDs)

SECTION 4 – CIRCUIT SPECIFICATION

4.1 – Standard circuits
4.2 – Final circuits using 13A socket-outlets (to BS1363-2) and fused connection units (to BS1363-4)
4.3 – Permanently connected equipment: requirements for switching
4.4 – Cooker circuits in household or similar premises
4.5 – Water and space heating
4.6 – Lighting circuits

SECTION 5 – KITCHENS, SPECIAL INSTALLATIONS, SPECIAL LOCATIONS ETC

5.1 – Introduction
5.2 – Kitchens
5.3 – Locations containing a bath or shower
5.4 – Swimming pools, hot tubs, etc
5.5 – Hot air saunas
5.6 – Floor and ceiling heating systems
5.7 – Outdoor lighting and power, sheds, garages and greenhouses
5.8 – Solar photovoltaic systems and small-scale embedded generators
5.9 – Builder's supplies
5.10 – Electric vehicle charging installations

SECTION 6 – INSPECTION AND TESTING

6.1 – Introduction
6.2 – Inspection
6.3 – Testing
6.4 – Operation of residual current devices (RCDs) and residual current breakers with overcurrent protection (RCBOs)

SECTION 7 – SAFE WORKING

7.1 – Safety policy and risk assessment
7.2 – Pre-work survey
7.3 – Pre-work tests
7.4 – Isolation
7.5 – Defects in electrical installations

SECTION 8 – MAINTENANCE

8.1 – The need for maintenance
8.2 – Domestic installations
8.3 – Purpose of periodic inspections (condition reporting)
8.4 – Electrical Installation Condition Report

SECTION 9 – THREE-PHASE SUPPLIES

9.1 – Electricity distribution
9.2 – Dwellings
9.3 – Characteristics of three-phase supplies
9.4 – Fault levels
9.5 – Design
9.6 – Alternating voltage and current
9.7 – Complex power
9.8 – Single-phase AC equipment
9.9 – Three-phase AC equipment

SECTION 10 – OTHER BUILDING REGULATIONS

10.1 – Structure (Approved Document A)
10.2 – Fire safety (Approved Document B)
10.3 – Site preparation and resistance to contaminants and moisture (Approved Document C)
10.4 – Resistance to the passage of sound (Approved Document E)
10.5 – Ventilation (Approved Document F)
10.6 – Conservation of fuel and power in dwellings (Approved Document L)
10.7 – Access to and use of buildings (Approved Document M)

SECTION 11 – IDENTIFICATION OF CONDUCTORS

11.1 – Introduction
11.2 – Addition or alteration to an existing installation
11.3 – Switch wires in a new installation or an addition or alteration to an existing installation
11.4 – Intermediate and two-way switch wires in a new installation or an addition or alteration to an existing installation
11.5 – Line conductors in a new installation or an addition or alteration to an existing installation
11.6 – Changes to cable core colour identification
11.7 – Addition or alteration to a DC installation

SECTION 12 – SCOTTISH BUILDING REGULATIONS

12.1 – Introduction
12.2 – Legislation
12.3 – Scottish guidance documents
12.4 – Procedures
12.5 – Electrical installations
12.6 – Guidance on electrical work not requiring a warrant
12.7 – Comparison between Scottish and English guidance documents

SECTION 13 – WELSH BUILDING REGULATIONS

13.1 – Introduction
13.2 – Approved document P: Electrical safety – dwellings
13.3 – Notification to Building Control
13.4 – Non-notifiable minor work
13.5 – Provision of information

APPENDICES

A Electrical Safety Standard in the Private Rented Sector (England) Regulations 2020
B Approved document B: Fire Safety, Volume 1 – Dwellings
C Safety instructions
D Additional guidance

On-Site guide

SECTION 1 – INTRODUCTION

1.1 – Scope
1.2 – Building Regulations
1.3 – Basic information required
1.4 – Intended departures from BS7671

SECTION 2 – THE ELECTRICAL SUPPLY

2.1 – General layout of equipment
2.2 – Function of components
2.3 – Separation of gas installation pipework from the electrical installation
2.4 – Portable generators

SECTION 3 – PROTECTION

3.1 – Types of protective device
3.2 – Protection against overload current
3.3 – Protection against short-circuit current and earth fault current
3.4 – Protection against electric shock
3.5 – Automatic disconnection
3.6 – Residual current devices (RCDs)
3.7 – Surge protection devices (SPDs)
3.8 – Arc fault detection devices (AFDDs)

SECTION 4 – EARTHING AND BONDING

4.1 – Protective earthing
4.2 – Legal requirements
4.3 – Main protective bonding
4.4 – Earthing conductor and main protective bonding conductor cross-sectional area
4.5 – Main protective bonding of plastic services
4.6 – Supplementary bonding
4.7 – Additional protection – supplementary equipotential bonding
4.8 – Supplementary bonding of plastic pipe installations
4.9 – Earth electrode
4.10 – Types of earth electrode
4.11 – Typical earthing arrangements for various types of earthing systems

SECTION 5 – ISOLATION AND SWITCHING

5.1 – Isolation
5.2 – Switching for mechanical maintenance
5.3 – Emergency switching off
5.4 – Functional switching
5.5 – Firefighter's switch

SECTION 6 – LABELLING

6.1 – Retention of a dangerous electric charge
6.2 – Where the operator cannot observe the operation of switchgear and control gear
6.3 – Unexpected presence of nominal voltage exceeding 230V
6.4 – Earthing and bonding conductors
6.5 – Purpose of switchgear and controlgear
6.6 – Identification of protective conductors
6.7 – Identification of isolators
6.8 – Isolation requiring more than one device
6.9 – Periodic inspection and testing
6.10 – Diagrams
6.11 – Residual current devices (RCDs)
6.12 – Warning notice – non-standard colours
6.13 – Warning notice – alternative supplies
6.14 – Warning notice – high protective conductor current
6.15 – Warning notice – photovoltaic (PV) systems
6.16 – Warning and user instruction labels

SECTION 7 – FINAL CIRCUITS

7.1 – Final circuits
7.2 – Standard final circuits
7.3 – Installation considerations
7.4 – Proximity to electrical and other services
7.5 – Earthing requirements for the installation of equipment having high protective conductor current
7.6 – Electrical supplies to furniture
7.7 – Trunking installations
7.8 – Additions and alterations
7.9 – Installation and use of non-standard cables
7.10 – EMC Directive and compatibility
7.11 – Wiring systems in escape rooms

SECTION 8 – LOCATIONS CONTAINING A BATH OR SHOWER

8.1 – Summary of requirements
8.2 – Shower cubicle in a room used for other purposes
8.3 – Underfloor heating systems

SECTION 9 – INSPECTION AND TESTING

9.1 – Inspection and testing
9.2 – Inspection
9.3 – Testing

SECTION 10 – GUIDANCE ON INITIAL TESTING OF INSTALLATIONS

10.1 – Safety and equipment
10.2 – Sequence of tests
10.3 – Test procedures

SECTION 11 – OPERATIONS OF RCDS

11.1 – General test procedures
11.2 – General-purpose RCCBs to BS4293 and RCD protected socket-outlets and fused connection units to editions of BS7288 earlier than 2018
11.3 – General-purpose RCCBs to BSEN61009 or RCBOs to BSEN61009 and BSEN62423
11.4 – RCD protected socket-outlets and fused connection units (ECU) to BS7288:2016
11.5 – Additional protection
11.6 – Integral test device
11.7 – Multipole RCDs

SECTION 12 – PROSUMER'S ELECTRICAL INSTALLATIONS

12.1 – Prosumer's installations
12.2 – Types of prosumer's electrical installation
12.3 – Operating modes

APPENDICES

A Maximum demand and diversity
B Maximum permissible measured earth fault loop impedance
C Selection of types of cable for particular uses and external influences
D Methods of support for cables, conductors and wiring systems
E Cable capacities of conduit and trunking
F Current-carrying capacities and voltage drop for copper conductors
G Certification and reporting
H Standard circuit arrangements for household and similar installations
I Resistance of copper and aluminium conductors
J Selection of devices for isolation and switching
K Identification of conductors
L Degrees of protection provided by enclosures (IP code)

In-service Inspection and Testing of electrical equipment

SECTION 1 – INTRODUCTION

1.1 – The electrical installation
1.2 – Domestic properties
1.3 – Application
1.4 – Medical equipment
1.5 – Summary of the objectives of this Code of Practice

SECTION 2 – DEFINITIONS

SECTION 3 – LEGAL REQUIREMENTS

3.1 – The legislation
3.2 – Responsibilities
3.3 – Maintenance

SECTION 4 – EQUIPMENT SCOPE AND THE NEED FOR MAINTENANCE

4.1 – Equipment covered by this Code of Practice
4.2 – The electrical installation
4.3 – Programmed maintenance and period inspections
4.4 – Examples of equipment out of scope of this Code of Practice
4.5 – Observations on the electrical installation
4.6 – In-service inspection and testing procedures

SECTION 5 – TRAINING AND COMPETENCE

5.1 – The user
5.2 – The inspector
5.3 – The test operative
5.4 – The duty holder or manager
5.5 – The person repairing faulty equipment

SECTION 6 – EQUIPMENT CLASSIFICATION

6.1 – Earth exposed metalwork: Class I
6.2 – Double or reinforced insulation: Class II
6.3 – Information, communication and technology equipment (ITE) Class II FE
6.4 – Electrical separation
6.5 – Energy Source Class 1 (ES1)
6.6 – Other classes: Class 0 and Class OI
6.7 – Equipment classification summary

SECTION 7 – USER CHECKS

SECTION 8 – FORMAL VISUAL INSPECTION

8.1 – Manufacturers' instructions
8.2 – Suitability of the equipment for the environment

8.3 – Switching and isolation of equipment
8.4 – User feedback
8.5 – The equipment
8.6 – Equipment failing the formal visual inspection
8.7 – Recording the formal visual inspection
8.8 – Inspecting hand-held equipment
8.9 – Inspection f fixed equipment

SECTION 9 – TEST INSTRUMENTS

9.1 – Safety of test equipment
9.2 – Dedicated equipment testing instruments
9.3 – Continuity testing
9.4 – Insulations resistance testing
9.5 – RCD test instruments
9.6 – Instrument verification

SECTION 10 – ELECTRICAL TESTS

10.1 – Safety
10.2 – Preliminary inspections
10.3 – Test procedures
10.4 – In-service tests
10.5 – The protective conductor continuity test
10.6 – The insulation resistance test
10.7 – Protective conductor and touch current measurements
10.8 – Functional checks
10.9 – Damaged or faulty equipment
10.10 – Equipment lead sets and extension leads
10.11 – Testing RCDs
10.12 – High protective conductor currents
10.13 – Replacement of equipment flexes
10.14 – BS1363 plugs and BS1362 fuses
10.15 – Equipment that cannot be located

SECTION 11 – THE FREQUENCY OF INSPECTION AND TESTING

11.1 – Risk assessment
11.2 – Inspections
11.3 – Defined risk environments
11.4 – Review of frequency of inspection and testing

SECTION 12 – REPORTING AND RECORD-KEEPING

12.1 –Documentation
12.2 – Labelling
12.3 – Damaged or faulty equipment
12.4 – User responsibilities

SECTION 13 – NEW AND THIRD-PARTY EQUIPMENT

13.1 –New equipment and appliances
13.2 – Second-hand equipment
13.3 – Hired equipment
13.4 – Counterfeit equipment
13.5 – Product recalls

APPENDICES

1 British Standards
2 IP and IK Codes
3 Changes to electrical safety terminology and classifications
4 Model forms
5 Resistances of flexible cables
6 User checks and formal visual inspections
7 Equipment racks and bays
8 Electrical units and calculations relating to the inspection and testing of electrical equipment
9 Example risk assessments

Guidance Note 3 – Inspection and Testing

CHAPTER 1 – GENERAL REQUIREMENTS

1.1 – Safety
1.2 – Required competence
1.3 – The client
1.4 – Additions and alterations
1.5 – Departures and non-compliance
1.6 – Record-keeping
1.7 – Installations requiring special knowledge, training or experience

CHAPTER 2 – INITIAL VERIFICATION

2.1 – Purpose of initial verification
2.2 – Certificates
2.3 – Required information
2.4 – Frequency of subsequent inspections
2.5 – Initial inspection
2.6 – Tests associated with initial verification

CHAPTER 3 – PERIODIC INSPECTION AND TESTING

3.1 – Purpose of periodic inspection and testing
3.2 – Necessity for periodic inspection and testing
3.3 – Electricity at Work regulations (EAWR)
3.4 – Design

3.5 – Routine checks
3.6 – Required information
3.7 – Frequency of periodic inspections
3.8 – Requirements for periodic inspection and testing
3.9 – Periodic inspection
3.10 – Periodic testing
3.11 – Electrical Installation Condition Report (EICR)
3.12 – Periodic inspection of installations constructed to an earlier version of BS7671 or the IEE Wiring Regulations

CHAPTER 4 – TEST INSTRUMENTS AND EQUIPMENT

4.1 – Instrument standard
4.2 – Instrument accuracy
4.3 – Low-resistance ohmmeters
4.4 – Insulation resistance testers
4.5 – EFLI testers
4.6 – Earth electrode resistance testers
4.7 – RCD Testers
4.8 – Phase rotation instruments
4.9 – Thermographic equipment

CHAPTER 5 – FORMS

5.1 – Initial verification (inspection and testing) forms
5.2 – Minor works
5.3 – Periodic inspection and testing
5.4 – Examples of completed model forms for certification and reporting

APPENDICES

A Maximum possible measured earth fault loop impendence (EFLI)
B Resistance of copper and aluminium conductors
C Use of earth leakage current clamp meter to provide and indication of the state of the insulation
D Safety check for diverted neutral currents

Electrical vehicle charging Equipment Installation

SECTION 1 – SCOPE

SECTION 2 – OVERVIEW OF EV CHARGING EQUIPMENT

SECTION 3 – ARRANGEMENT PRIOR TO INSTALLATION COMMENCEMENT

SECTION 4 – PHYSICAL INSTALLATION REQUIREMENTS

SECTION 5 – ELECTRICAL REQUIREMENTS – GENERAL

SECTION 6 – ELECTRICAL REQUIREMENTS – DWELLING INSTALLATIONS

SECTION 7 – ELECTRICAL REQUIREMENTS - ON-STREET INSTALLATIONS

SECTION 8 – ELECTRICAL REQUIREMENTS – COMMERCIAL AND INDUSTRIAL INSTALLATIONS

SECTION 9 – INSPECTION, TESTING AND MAINTENANCE REQUIREMENTS

SECTION 10 – VEHICLE AS STORAGE

SECTION 11 – DISTRIBUTION NETWORK OPERATOR (DNO) NOTIFICATION

SECTION 12 – INTEGRATION AND SMART INFRASTRUCTURE

APPENDICES

- A Charging connectors and charging cables types
- B Checklists for dwelling installations
- C Checklists for on-street installations
- D Checklists for commercial and industrial installations
- E Checklists for fuel filling station installations
- F Wireless power transfer (WPT) installations
- G Installing an earth electrode system to enable use of a PME supply earth, in accordance with Regulation 722.411.4.1 (ii) of BS7671
- H Separation of earth electrode zones where TT is used, and installation of electrodes
- I Determining a suitable location and voltage tripping threshold for a measurement earth electrode if used for compliance with Regulation 722.411.4.1 (iii) of BS7671
- J A rule of thumb for three-phase system balance in accordance with Regulation 722.411.4.1 (i) of BS7671
- K Supply and earthing arrangements for Mode 4 DC EVSE
- L Requirements for Electrical Installations BS7671:2018 Amendment 1:2020
- M Glossary
- N Figures and Tables
- O References

Electricity at Work Regulations

Regulation 1 – Citation and commencement

Regulation 2 – Interpretation

Regulation 3 – Persons on whom duties are imposed by these Regulations

Regulation 4 – Systems, work activities and protective equipment

Regulation 5 – Strength and capability of electrical equipment

Regulation 6 – Adverse of hazardous environments

Regulation 7 – Insulation, protection and placing of conductors

Regulation 8 – Earthing and other suitable precautions

Regulation 9 – Integrity of referenced conductors

Regulation 10 – Connections

Regulation 11 – Means for protecting from excess of current

Regulation 12 – Means for cutting off the supply and for isolation

Regulation 13 – Precautions for work on equipment made dead

Regulation 14 – Work on or near live conductors

Regulation 15 – Working space, access and lighting

Regulation 16 – Persons to be competent to prevent danger and injury

Regulation 29 – Defence

Regulation 30 – Exemption certificates

Regulation 31 – Extension outside Great Britain

Regulation 32 – Disapplication of duties

Regulation 33 – Revocations and modifications

Approved documents

A Structure

B Fire safety

C Site preparation and resistance to contaminants and moisture

D Toxic substances

E Resistance to passage of sound

F Ventilation
